

## Colocation Services – Managed and Unmanaged

Companies understand how critical it is that their servers and data be stored and hosted in the most secure, reliable manner possible. For those needs, MegaNet maintains a carrier-class collocation facility in the city of Providence, RI.

Our data center is located at the Foundry Complex near the Providence Place Mall and is connected to MegaNet's regional fiber loop. Just off of major highways, our data center provides a convenient location for businesses in Massachusetts, Rhode Island, and Connecticut.

This facility was designed to service customers who require primarily AC power in a climate controlled carrier neutral facility with redundant climate control and backup generator power. DC power is available upon request. Easy access is also available to other networks in the same complex including Verizon, AT&T, Level3 Communications, and Cox among others.

The MegaNet datacenter is accessible 24/7 by clients and employs state of the art fire suppression and closed circuit security monitoring. All access points are secured by multiple authentication methods including keycard and individual alarm code. Any entrance into the facility is logged by the MegaNet NOC for security purposes.

MegaNet can provide collocation space as small as 1U open rack, all the way through locked cabinets and dedicated cages. Bandwidth is provided on a burstable basis to make sure your servers are always reachable, no matter the traffic load they may be under from your clients. No matter your business size or data needs, MegaNet has a collocation package that will be customized for you.

MegaNet can host and manage both application and email servers for customers of any size. Service includes 24x7 monitoring and management.

**Offsite Storage Solutions**

Clients locate server equipment in our secure facility and perform secure, encrypted, offsite backups of critical data.

**MegaColo Customer Testimonials**

*Since our business operates 24/7, internet continuity and around-the-clock security is essential. With over 40 email servers being housed at MegaNet's Data Center we've come to trust their team of professionals. There's only one reason we house our servers at MegaNet – dependability.*

Paul Roulier – Owner  
Peer-to-Peer  
EMail Spam Filtering Services

---

*We're extremely satisfied with the email server that we host with MegaNet. It's extremely versatile, reliable and was a snap to setup. Sharing schedules and address books within the organization or just with selected users helped us immensely. Administering it is a snap compared to other programs we've used. The fact that it's web based has changed the way we work. Thanks to the staff at MegaNet for their expert, timely and helpful support with this great product.*
